

RoadStar

Rehearse a recovery

Carrier dispatch, driver execution and detention evidence

RoadStar Hackathon 2026

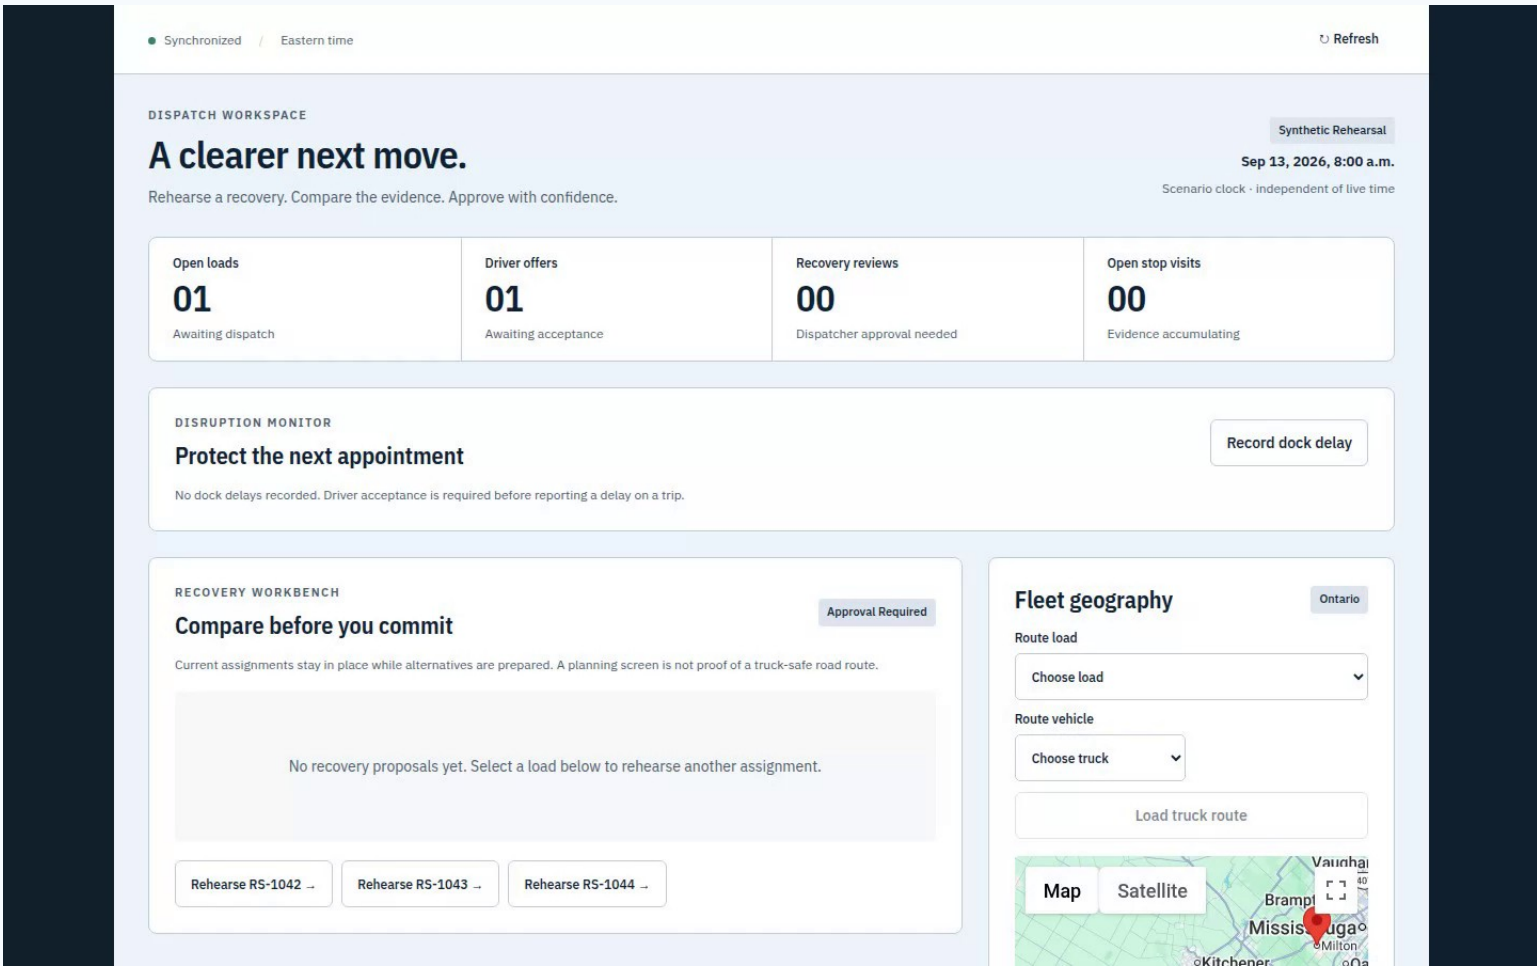

A dock delay affects the next pickup

One truck is delayed at the dock.

Its next assignment still needs a driver, truck and trailer.

The dispatcher needs a feasible alternative and a clear approval.

Rehearse the recovery

Synthetic scenario with actual Ontario truck routing

Approve against current evidence

Compare the replacement

Recheck current versions

Reserve resources atomically

Keep the approval record

×

Approve the recovery?

The server will recheck the load version, reservations and supporting evidence before replacing the assignment.

RS-1043 will be offered to **Morgan Singh · demo**.

The previous assignment will be superseded atomically. The new driver must accept the offer.

Declared HOS budgets · Valhalla truck route with supplied dimensions; OSM restriction coverage applies

Approve revision 1

The driver keeps the work

Manifest and next action

Visible pending acceptance while offline

Session, trip and draft survive termination

Server acknowledgement confirms execution

Verified on Android emulator. Physical phone and iOS testing deferred.

Documents and detention stay connected

The screenshot displays a web interface with a central content area flanked by dark vertical bars. At the top, a header bar contains a long alphanumeric string: 1e263e7003ebf692ef0a77c25796f9426648e38eb40950cc249a639b5f475f11. Below this, a document titled "synthetic-arrival-instructions.pdf" is shown with the status "RS-1042 · other · stored · reviewed". To the right of the document title are three buttons: "Download original", "Review fields", and "Save facility instructions". Below the document title is another alphanumeric string: 2ba145537d20573ad9912d3fd92365dfafadbe22ddda8bd998447abafda1954e. A section titled "Reviewed facility instructions" contains a box for "RS-1042 · milton-yard" with the text "Use south gate; call receiving." and a link "Source document · reviewed revision 4". Below this is a section titled "Stop evidence & detention billing" with a sub-header "Observed Samples". A paragraph explains: "GPS arrival and departure observations retain their sample precision through approval. Billing approval records a reviewed revision; it does not initiate payment." Below this is a box for "RS-1042 · milton-yard" with the date range "Sep 13, 2026, 8:30 a.m. → Sep 13, 2026, 11:17 a.m." and a button "Review stop evidence". Below this is a table with two rows. The first row is for "RS-1042 · revision 2" with a value of "\$78.33" and a status of "Approved". The second row is for "RS-1042 · revision 1" with a value of "\$78.33" and a status of "Draft".

Stop evidence & detention billing Observed Samples

GPS arrival and departure observations retain their sample precision through approval. Billing approval records a reviewed revision; it does not initiate payment.

RS-1042 · milton-yard
Sep 13, 2026, 8:30 a.m. → Sep 13, 2026, 11:17 a.m. Review stop evidence

RS-1042 · revision 2 167 minutes observed · 47 billable minutes Timestamp precision: observed samples ► Approval evidence	\$78.33	Approved
RS-1042 · revision 1 167 minutes observed · 47 billable minutes Timestamp precision: observed samples · historical revision; latest is 2	\$78.33	Draft

Observed samples require review. Approved revision preserves the draft.

One route, one ordered manifest

Two LTL loads

One vehicle pairing

Four ordered stops

One approval

Synthetic pallet capacity is explicit

Today's trips

Rehearse a recovery. Compare the evidence. Approve with confidence.

Load truck route

Map Satellite

Driver positions from operational records. Select a load and vehicle to request its truck route.

All five workbook sheets retain lineage

Sheet	Rows
Tlorder	4,031
Dispatch	10,479
Driver	131
Trucks	131
Trailers	425

15,197 source rows

82 exact dispatch duplicates

Historical provenance preserved

Private data stays local

Public preview uses labeled synthetic operational scenarios.

One operational database

React web and Expo clients share validated commands.

Fastify checks Firebase identity and carrier membership.

PostgreSQL owns versions, reservations and evidence.

OR-Tools, Valhalla and Gemini return proposals or extraction.

Independent replay keeps its own scenario clock.

Measured proof and remaining limits

21 backend checks plus real-road manifest integration

131-driver cloud burst completed with no failed commands

Synchronization lag p95: 5.4 seconds in that burst

Physical background location and native iOS still need testing

Declared duty budgets are not a certified ELD.

Next carrier evaluation

Validate Android and iPhone on physical devices.

Review capacities, duty inputs and facility instructions.

Measure dispatcher decisions and driver completion in a pilot.

Preview: roadstar-web-739889188415.us-central1.run.app

Appendix: concurrent approval

A command identifies its intent and expected version.

Approval rechecks availability inside the transaction.

Exclusion constraints reject incompatible resource periods.

Commit-ordered events prevent missed cursor updates.

A repeated key returns its original result.

Appendix: replay and telemetry evidence

Replay starts from the same recorded scenario conditions.

Dock wait and road assumptions are disclosed.

Duplicate and out-of-order GPS cannot double-count a visit.

Uncertain boundaries stay uncertain.

Compare operational outcomes separately from modeled savings.
